

High Country Perennials

Here are some of our favorite high - country perennials. These will work at higher altitudes found in Breckenridge, Frisco, Dillon, Keystone, Silverthorne, etc.

Of course, so much depends on soil, sun and wind exposure, air movement, and where your garden is located. It is amazing how weather patterns and zone hardiness vary from front to back yard, house to house, and neighborhood to neighborhood.

This is by no means a complete list of perennials that can grow here.

Many more flowers can be happy and successful with the creation of micro-climates and elevation. Call us today to see what else you may be able to grow.

| | |
|---------------------------|-----------------------------|
| Nodding onion | <i>Allium cernuum</i> |
| Yarrow | <i>Achillea spp.</i> |
| Monkshood | <i>Aconitum</i> |
| Bishops weed | <i>Aegopodium</i> |
